1.8.2 Derating for Low Air Pressure	1-45

1 Quick Guide

1.1 Safety

1.1.1 Warnings

WARNING

High Voltage Warning

The voltage of the Adjustable frequency drive is dangerous whenever it is connected to line power. Incorrect installation of the motor or Adjustable frequency drive may cause damage to the equipment, serious injury or death. Consequently, it is essential to comply with the instructions in this manual as well as local and national rules and safety regulations.

WARNING

Electrical Hazard

Touching the electrical parts may be fatal - even after the equipment has been disconnected from line power. Also make sure that other voltage inputs have been disconnected (linkage of DC intermediate circuit). Be aware that there may be high voltage on the DC link even when the LEDs are turned off. Before touching any potentially live parts of the Adjustable frequency drive, wait at least as stated in the table below:

Voltage (V)	Power range (HP/kW)	Min. waiting time (minutes)
3 x 200	0.34–5 [0.25–3.7]	4
3 x 200	7.5–15 [5.5–11]	15
3 x 400	0.5–10 [0.37–7.5]	4
3 x 400	15–125 [11–90]	15
3 x 600	3–10 [2.2–7.5]	4
3 x 600	15–125 [11–90]	15

Table 1.1

CAUTION

Leakage Current:

The ground leakage current from the Adjustable frequency drive exceeds 3.5 mA. According to IEC 61800-5-1, a reinforced protective ground connection must be ensured by means of a min. 0.016 in² [10 mm²] Cu or an additional PE wire - with the same cable cross-section as the line power wiring - must be terminated separately.

Residual Current Device:

This product can cause a DC current in the protective conductor. Where a residual current device (RCD) is used for extra protection, only an RCD of Type B (time delayed) shall be used on the supply side of this product. See also Armstrong Application Note on RCD, MN90GXYY.

Protective grounding of the Adjustable frequency drive and the use of RCDs must always follow national and local regulations.

Motor thermal protection:

Motor overload protection is possible by setting Parameter 1-90 Motor thermal protection to the value Electronic Thermal Relay (ETR) trip.

WARNING

Installation at high altitudes

For altitudes above 6,600 feet [2 km], please contact Armstrong regarding PELV.

1.1.2 Safety Instructions

- Make sure the Adjustable frequency drive is properly grounded.
- Do not remove AC line input connections, motor connections or other power connections while the Adjustable frequency drive is connected to power.
- Protect users against supply voltage.
- Protect the motor against overloading according to national and local regulations.
- The ground leakage current exceeds 3.5 mA.
- The [OFF] key is not a safety switch. It does not disconnect the Adjustable frequency drive from line power.

1.2 Introduction

1.2.1 Available Literature

This quick guide contains the basic information necessary for installing and running the Adjustable frequency drive.

1.2.2 Approvals

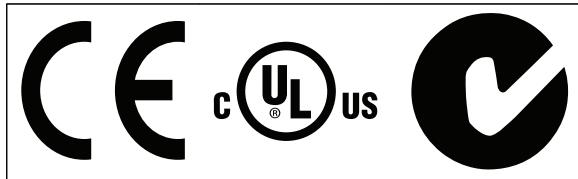

Table 1.2

1.2.3 IT Line Power

CAUTION

IT Line Power

Installation on an isolated line power source, i.e., IT line power.

Max. supply voltage allowed when connected to line power: 440 V (3 x 380–480 V units).

On IP20 200–240 V 0.34–15 hp [0.25–11 kW] and 380–480 V IP20 0.5–30 hp [0.37–22 kW], open the RFI switch by removing the screw on the side of the Adjustable frequency drive when at IT grid.

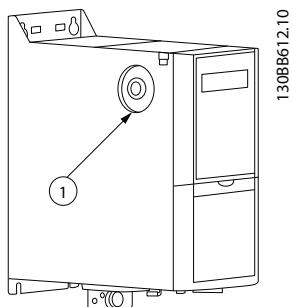

Figure 1.1 IP20 200–240 V 0.34–15 hp [0.25–11 kW], IP20 0.5–30 hp [0.37–22 kW] 380–480 V.

1: EMC screw

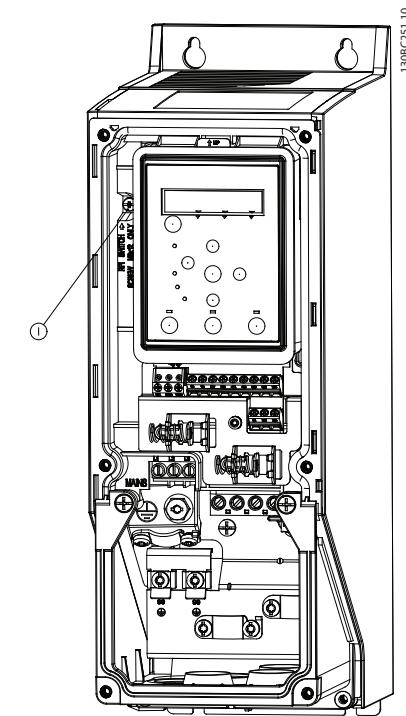

Figure 1.2 IP54 400 V 1–25 hp [0.75–18.5 kW]

1: EMC screw

On all units, set par. 14-50 *RFI filter* to *OFF* when operating in IT line power.

CAUTION

If reinserted, only use M3 x 12 screw.

1.2.4 Avoid Unintended Start

While the Adjustable frequency drive is connected to line power, the motor can be started/stopped using digital commands, bus commands, references or via the LCP.

- Disconnect the Adjustable frequency drive from line power whenever personal safety considerations make it necessary to avoid unintended start of any motors.
- To avoid unintended start, always activate the [OFF] key before changing parameters.

1.2.5 Disposal Instructions

	<p>Equipment containing electrical components may not be disposed of together with domestic waste.</p> <p>It must be separately collected with electrical and electronic waste according to local and currently valid legislation.</p>
---	--

Voltage (V)	Power range (HP/kW)	Min. waiting time (minutes)
3 x 200	0.34–5 [0.25–3.7]	4
3 x 200	7.5–60 [5.5–45]	15
3 x 400	0.5–10 [0.37–7.5]	4
3 x 400	15–125 [11–90]	15
3 x 600	3–10 [2.2–7.5]	4
3 x 600	15–125 [11–90]	15

Table 1.3

1.3 Installation

1.3.1 Before Starting Repair Work

1. Disconnect IVS-B from line power (and external DC supply, if present.)
2. Wait as long as indicated in the table below for the DC link to discharge:

1.3.2 Side-by-Side Installation

The Adjustable frequency drive can be mounted side-by-side and requires the clearance above and below for cooling.

Frame	IP class	Power			Clearance above/below (mm/inch)
		3 x 200–240 V	3 x 380–480 V	3 x 525–600 V	
H1	IP20	0.25–1.5 kW/0.33–2 HP	0.37–1.5 kW/0.5–2 HP		100/4
H2	IP20	2.2 kW/3 HP	2.2–4 kW/3–5.4 HP		100/4
H3	IP20	3.7 kW/5 HP	5.5–7.5 kW/7.5–10 HP		100/4
H4	IP20	5.5–7.5 kW/7.5–10 HP	11–15 kW/15–20 HP		100/4

1.3.5 Connecting to Line Power and Motor

The Adjustable frequency drive is designed to operate all standard three-phased asynchronous motors. For maximum cross-section on wires, please see section [1.6 General Specifications](#).

- Use a shielded/armored motor cable to comply with EMC emission specifications, and connect this cable to both the decoupling plate and the motor metal.
 - Keep motor cable as short as possible to reduce the noise level and leakage currents.
 - For further details on mounting of the decoupling plate, please see instruction MI02QXYY
 - Also see *EMC-Correct Installation* in the Design Guide, MG18CXYY.
1. Mount the ground wires to the ground terminal.
 2. Connect the motor to terminals U, V and W.
 3. Mount line power supply to terminals L1, L2 and L3 and tighten.

1.3.6 Fuses

Branch circuit protection

In order to protect the installation from electrical and fire hazards, all branch circuits in an installation, switch gears, machines etc., must be protected from short-circuits and overcurrents according to national/international regulations.

Short circuit protection

Armstrong recommends using the fuses mentioned in the following tables to protect service personnel or other equipment in case of an internal failure in the unit or short-circuit on DC link. The Adjustable frequency drive provides full short circuit protection in case of a short-circuit on the motor.

Overcurrent protection

Provide overload protection to avoid overheating of the cables in the installation. Overcurrent protection must always be carried out according to national regulations. Fuses must be designed for protection in a circuit capable of supplying a maximum of 100,000 A_{rms} (symmetrical), 480 V maximum.

Non UL compliance

If UL/cUL is not to be complied with, Armstrong recommends using the fuses mentioned in *Table 1.18*, which will ensure compliance with IEC 61800-5-1: In case of malfunction, not following the fuse recommendation may result in damage to the Adjustable frequency drive.

	Circuit Breaker		Fuse

Table 1.19 Fuses

1.3.7 EMC-compliant Electrical Installation

General points to be observed to ensure EMC-compliant electrical installation.

- Use only shielded/armored motor cables and shielded/armored control cables.
- Connect the shield to ground at both ends.
- Avoid installation with twisted shield ends (pigtails), since this ruins the shielding effect at

high frequencies. Use the cable clamps provided instead.

- It is important to ensure good electrical contact from the installation plate through the installation screws to the metal cabinet of the Adjustable frequency drive.
- Use star-washers and galvanically grounding plates.
- Do not use shielded/armored motor cables in the installation cabinets.

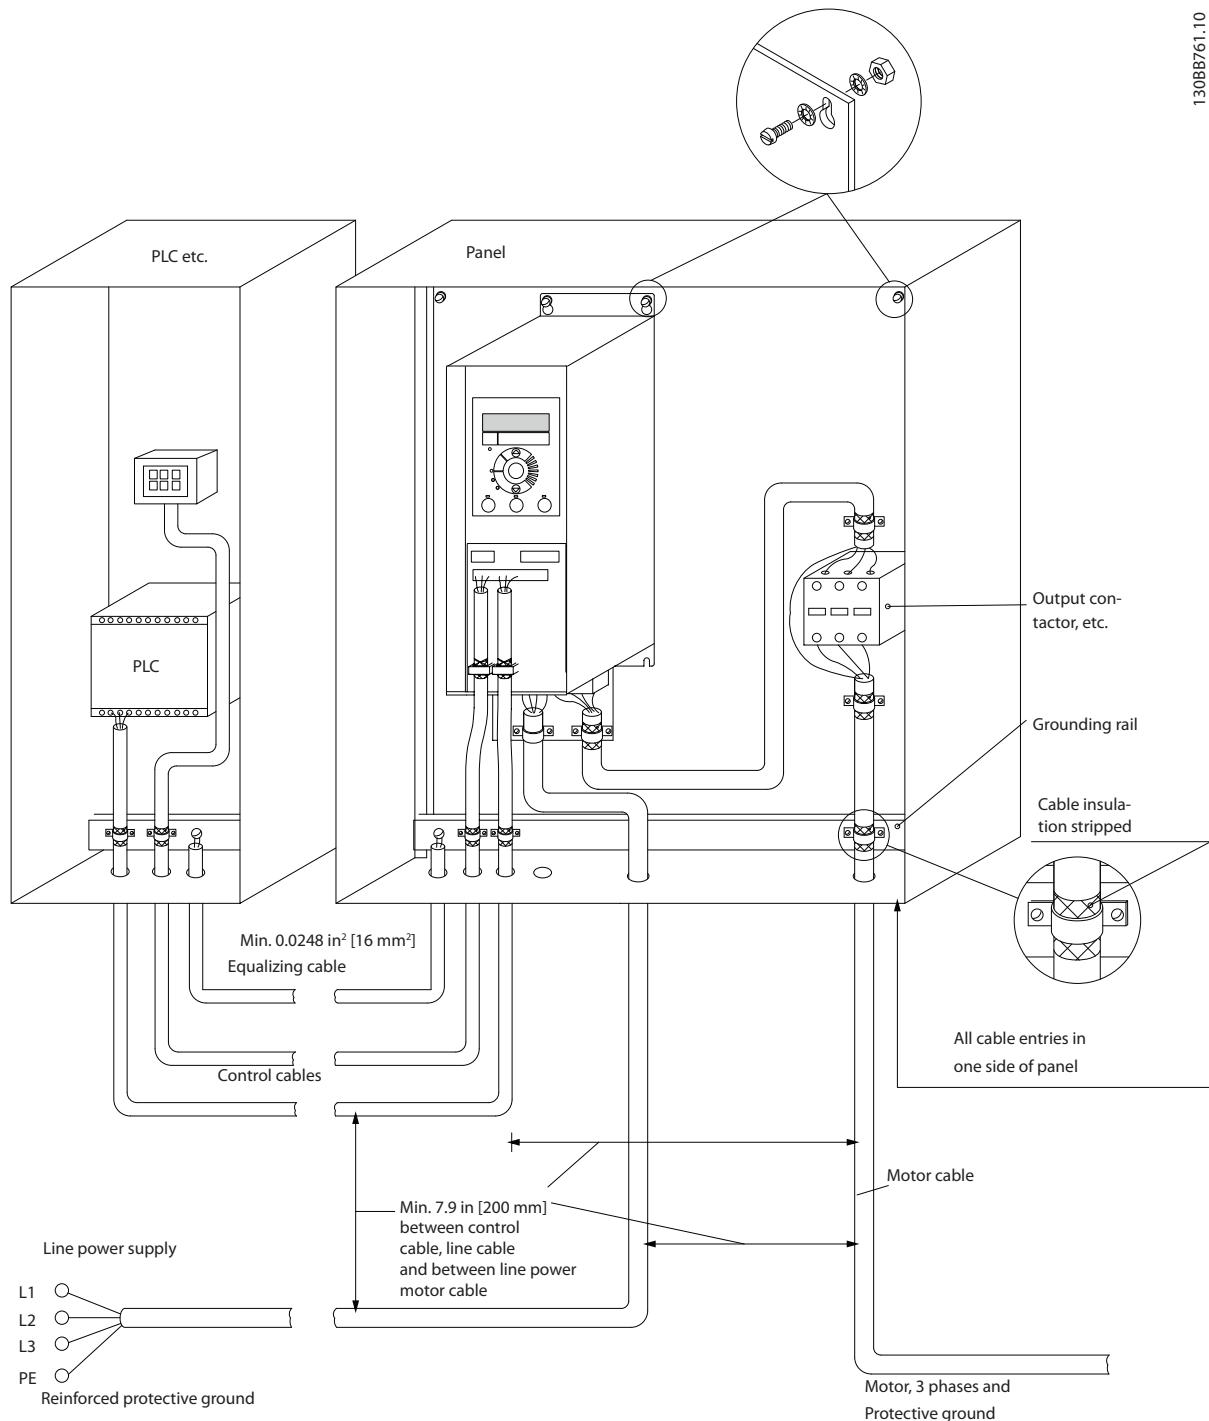

Figure 1.20 EMC-compliant Electrical Installation

For North America, use metal conduits instead of shielded cables.

1.3.8 Control Terminals

IP20 200–240 V 0.34–15 hp [0.25–11 kW] and IP20 380–480 V 0.5–30 hp [0.37–22 kW]:

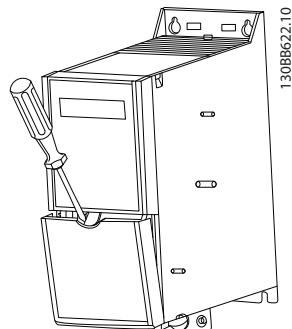

Figure 1.21 Location of Control Terminals

1. Place a screwdriver behind the terminal cover to activate snap.
2. Tilt the screwdriver outwards to open the cover.

IP20 380–480V 40–125 hp [30–90kW].

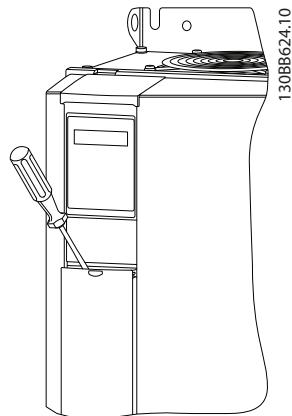

Figure 1.22

1. Place a screwdriver behind the terminal cover to activate snap.
2. Tilt the screwdriver outwards to open the cover.

Digital input 18, 19 and 27 mode is set in *5-00 Digital Input Mode* (PNP is default value) and digital input 29 mode is set in *5-03 Digital Input 29 Mode* (PNP is default value).

IP54 400 V 1–10 hp [0.75–7.5 kW]

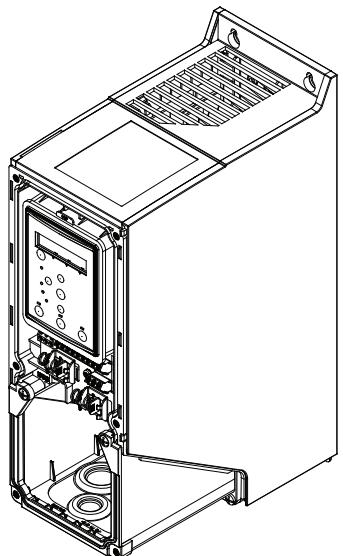

Figure 1.23

1. Remove the front cover.

Control terminals:

Figure 1.24 shows all control terminals of the Adjustable frequency drive. Applying Start (term. 18), connection between terminal 12-27 and an analog reference (term. 53 or 54 and 55) make the Adjustable frequency drive run.

BUS TER.

1.3.9 Electrical Overview

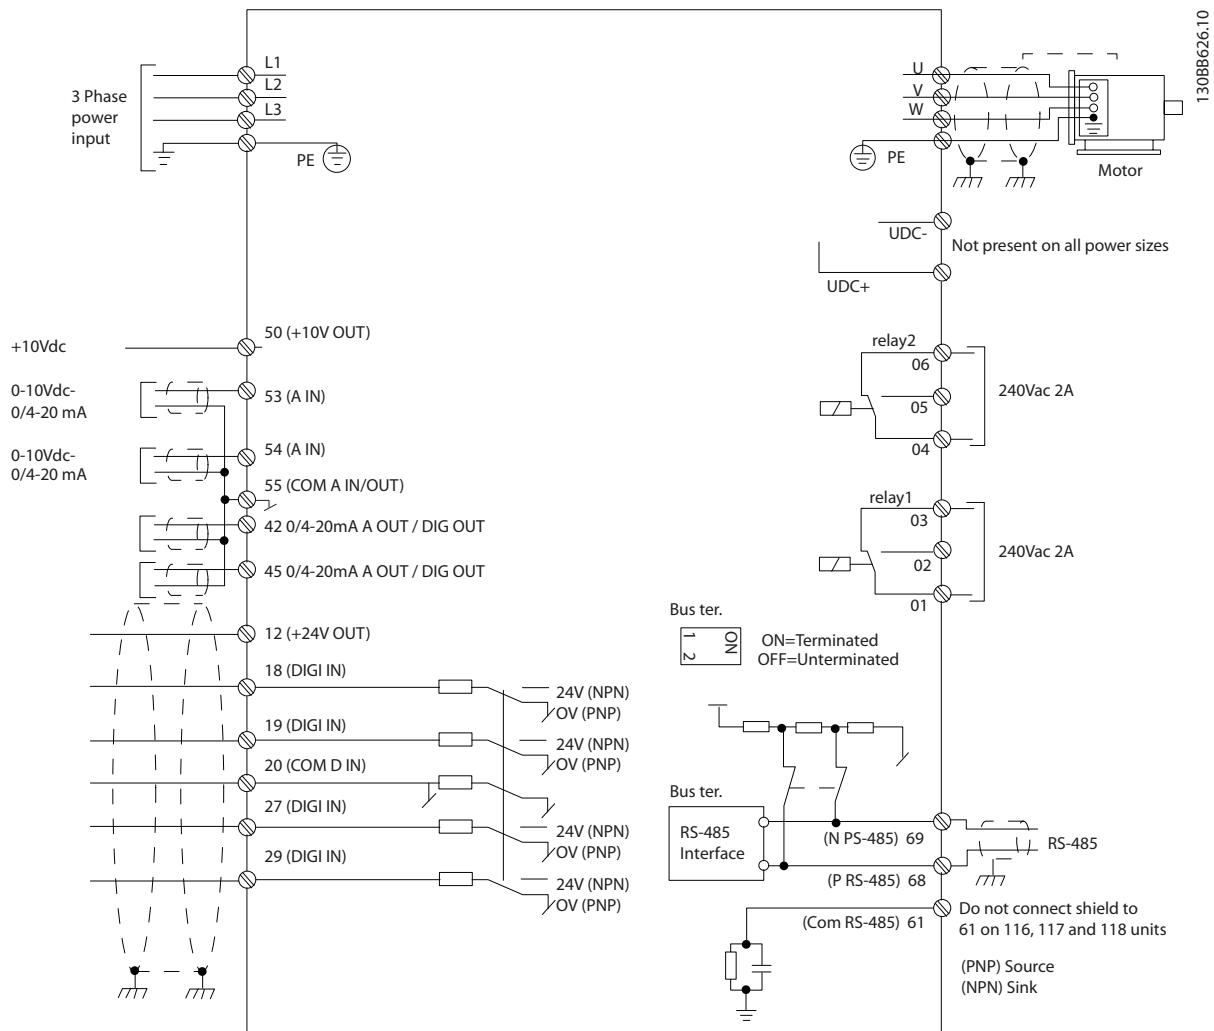

Figure 1.25

NOTE!

Please note there is no access to UDC- and UDC+ on the following units:

IP20 380–480 V 40–125 hp [30–90 kW]

IP20 200–240 V 20–60 hp [15–45 kW]

IP20 525–600 V 3–125 hp [2.2–90 kW]

IP54 380–480 V 30–125 hp [22–90 kW]

1.4 Programming

1.4.1 Programming with the Local Control Panel (LCP)

NOTE!

The Adjustable frequency drive can also be programmed from a PC via RS485 com-port by installing the MCT-10 Set-up Software.

1.4.2 Local Control Panel (LCP)

The following instructions are valid for the IVS-B LCP. The LCP is divided into four functional sections.

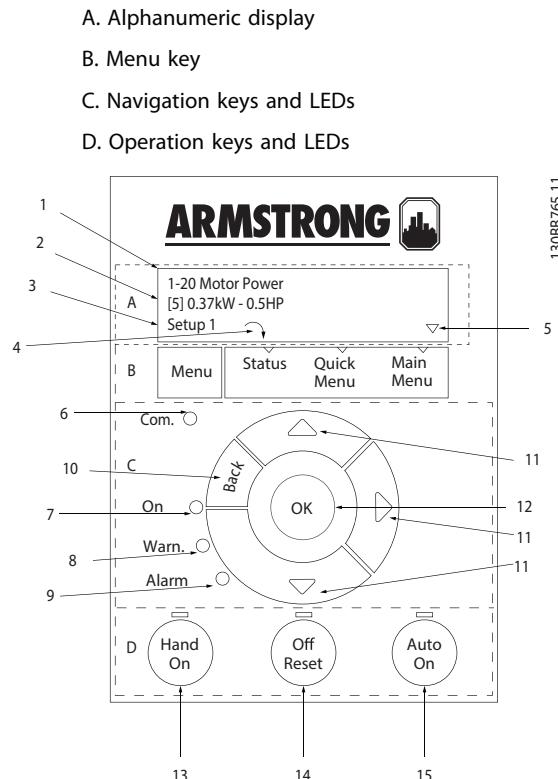

Figure 1.26

A. Alpha Numeric Display

The LCD display is back-lit with 2 alpha-numeric lines. All data is displayed on the LCP.

Certain information can be read from the display.

1	Parameter number and name.
2	Parameter value.
3	Set-up number shows the active set-up and the edit set-up. If the same set-up acts as both the active and edit set-up, only that set-up number is shown (factory setting). When the active and edit set-up differ, both numbers are shown in the display (Set-up 12). The flashing number indicates the edit set-up.
4	Motor direction is shown to the bottom left of the display – indicated by a small arrow pointing either clockwise or counter-clockwise.
5	The triangle indicates if the LCP is in status quick menu or main menu.

Table 1.20

B. Menu Key

Use the menu key to select between status quick menu or main menu.

C. Navigation keys and LEDs

6	Com led: Flashes when bus communication is communicating.
7	Green LED/On: Control section is working.
8	Yellow LED/Warn.: Indicates a warning.
9	Flashing Red LED/Alarm: Indicates an alarm.
10	[Back]: For moving to the previous step or layer in the navigation structure
11	Arrows [Δ] [∇]: For navigating between parameter groups, parameters and within parameters. Can also be used for setting local reference.
12	[OK]: For selecting a parameter and for accepting changes to parameter settings

Table 1.21

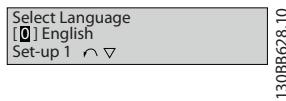

D. Operation keys and LEDs

13	[Hand On]: Starts the motor and enables control of the Adjustable frequency drive via the LCP. NOTE! Please note that terminal 27 Digital Input (5-12 Terminal 27 Digital Input) has coast inverse as default setting. This means that [Hand On] will not start the motor if there is no 24 V to terminal 27, so please connect terminal 12 to terminal 27.
14	[Off/Reset]: Stops the motor (off). If in alarm mode the alarm will be reset.
15	[Auto On]: Adjustable frequency drive is controlled either via control terminals or serial communication.

Table 1.22

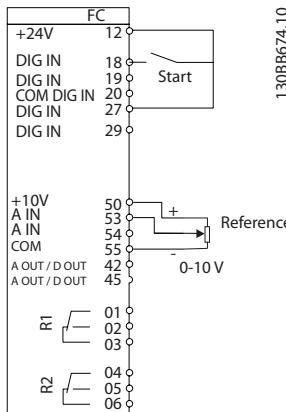

At power-up

At the first power-up, the user is asked to choose the preferred language. Once selected, this screen will never be shown again in the following power-ups, but the language can still be changed in *0-01 Language*.

**Figure 1.27**

1.4.3 The Start-up Wizard for Open-loop Applications

The built-in “wizard” menu guides the installer through the setup of the drive in a clear and structured manner in order to set up an open-loop application. An open-loop application is here an application with a start signal, analog reference (voltage or current) and optionally also relay signals (but no feedback signal from the process applied).

**Figure 1.28**

The wizard will initially be shown after power-up until any parameter has been changed. The wizard can always be accessed again through the Quick Menu. Press [OK] to start the wizard. If [BACK] is pressed, the IVS-B will return to the status screen.

**Figure 1.29**

1-20 Motor power	0.125–150 hp [0.09–110 kW]	Size related	Enter motor power from nameplate data
1-22 Motor Voltage	50.0–1,000.0 V	Size related	Enter motor voltage from nameplate data
1-23 Motor Frequency	20.0–400.0 Hz	Size related	Enter motor frequency from nameplate data
1-24 Motor Current	0.01–10,000.00 A	Size related	Enter motor current from nameplate data
1-25 Motor Nominal Speed	100.0–9,999.0 RPM	Size related	Enter motor nominal speed from nameplate data
4-12 Motor Speed Low Limit [Hz]	0.0–400 Hz	0.0 Hz	Enter the minimum limit for low speed
4-14 Motor Speed High Limit [Hz]	0.1–400 Hz	65 Hz	Enter the maximum limit for high speed
3-41 Ramp 1 Ramp Up Time	0.05–3,600.0 s	Size related	Ramp-up time from 0 to rated motor frequency parameter 1-23
3-42 Ramp 1 Ramp Down Time	0.05–3,600.0 s	Size related	Ramp-down time from rated motor frequency parameter 1-23 to 0
1-73 Flying Start	[0] Disabled [1] Enabled	0	Select Enable to enable the drive to catch a spinning motor.
3-02 Minimum Reference	-4,999–4,999	0	The minimum reference is the lowest value obtainable by summing all references.
3-03 Maximum Reference	-4,999–4,999	50	The maximum reference is the highest value obtainable by summing all references.
3-10 Preset Reference	-100–100%	0	Enter the setpoint.
6-29 Terminal 54 mode	[0] Current [1] Voltage	1	Select if terminal 54 is used for current or voltage input
6-20 Terminal 54 Low Voltage	0–10 V	0.07V	Enter the voltage that corresponds to the low reference value.
6-21 Terminal 54 High Voltage	0–10 V	10V	Enter the voltage that corresponds to the low high reference value.
6-22 Terminal 54 Low Current	0–20 mA	4	Enter the current that corresponds to the high reference value.
6-23 Terminal 54 High Current	0–20 mA	20	Enter the current that corresponds to the high reference value.
6-24 Terminal 54 Low Ref./Feedb. Value	-4,999–4,999	0	Enter the feedback value that corresponds to the voltage or current set in parameter 6-20/6-22
6-25 Terminal 54 High Ref./Feedb. Value	-4,999–4,999	50	Enter the feedback value that corresponds to the voltage or current set in parameter 6-21/6-23
6-26 Terminal 54 Filter Time Constant	0–10 s	0.01	Enter the filter time constant.
20-81 PI Normal/Inverse control	[0] Normal [1] Inverse	0	Select <i>Normal</i> [0] to set the process control to increase the output speed when the process error is positive. Select <i>Inverse</i> [1] to reduce the output speed.
20-83 PI Start Speed	0–200 Hz	0	Enter the motor speed to be attained as a start signal for commencement of PI control.
20-93 PI Proportional Gain	0–10	0.01	Enter the process controller proportional gain. Quick control is obtained at high amplification. However if amplification is too great, the process may become unstable.
20-94 PI Integral Time	0.1–999.0 s	999.0 s	Enter the process controller integral time. Obtain quick control through a short integral time, though if the integral time is too short, the process becomes unstable. An excessively long integral time disables the integral action.
1-29 Automatic Motor Adaption (AMA)		Off	Performing an AMA optimizes motor performance

Table 1.24

Motor Set-up

The Quick Menu Motor Set-up guides you through the needed motor parameters.

No & Name	Range	Default	Function

Table 1.25**Changes Made**

Changes Made lists all parameters changed since factory setting. Only the changed parameters in current edit-setup are listed in changes made.

If the parameter's value is changed back to the factory setting value from another different value, the parameter will NOT be listed in Changes Made.

1. Press [Menu] key to enter the Quick Menu until indicator in display is placed above Quick Menu.
2. Press [Δ] [∇] to select either IVS-B wizard, closed-loop set-up, motor set-up or changes made, then press [OK].
3. Press [Δ] [∇] to browse through the parameters in the Quick Menu.
4. Press [OK] to select a parameter.
5. Press [Δ] [∇] to change the value of a parameter setting.
6. Press [OK] to accept the change.
7. Press either [Back] twice to enter "Status", or press [Menu] once to enter "Main Menu".

The Main Menu accesses all parameters.

1. Press [Menu] key until indicator in display is placed above "Main Menu".
2. Use [Δ] [∇] to browse through the parameter groups.
3. Press [OK] to select a parameter group.
4. Use [Δ] [∇] to browse through the parameters in the specific group.
5. Press [OK] to select the parameter.
6. Use [Δ] [∇] to set/change the parameter value.

Table 1.31

1.6 Warnings and Alarms

Fault number	Alarm/Warning Bit Number	Fault text	Warning	Alarm	Trip locked	Cause of problem
2	16	Live zero error	X	X		Signal on terminal 53 or 54 is less than 50% of value set in par. 6-10, 6-12, 6-20 or 6-22. See also parameter group 6-0X
4	14	Mains ph. loss	X	X	X	Missing phase on supply side or too high voltage imbalance. Check supply voltage. See parameter 14-12
7	11	DC overvolt	X	X		Intermediate circuit voltage exceeds the limit.
8	10	DC undervolt	X	X		Intermediate circuit voltage drops below the "voltage warning low" limit.
9	9	Inverter overload	X	X		More than 100% load for too long.
10	8	Motor ETR over	X	X		Motor is too hot due to more than 100% load for too long. See parameter 1-90
11	7	Motor th over	X	X		The thermistor or the thermistor connection is disconnected. See parameter 1-90.
13	5	Overcurrent	X	X	X	Inverter peak current limit is exceeded.
14	2	Ground Fault		X	X	Discharge from output phases to ground.
16	12	Short Circuit		X	X	Short-circuit in the motor or on the motor terminals.
17	4	Ctrl.word TO	X	X		No communication to Adjustable frequency drive. See parameter group 8-0X
24	50	Fan Fault	X	X		The fan is not working (Only on 400 V 40–125 hp [30–90 kW] units).
30	19	U phase loss		X	X	Motor phase U is missing. Check the phase. See parameter 4-58.
31	20	V phase loss		X	X	Motor phase V is missing. Check the phase. See parameter 4-58.
32	21	W phase loss		X	X	Motor phase W is missing. Check the phase. See parameter 4-58.
38	17	Internal fault		X	X	Contact your local Armstrong supplier.
44	28	Ground Fault		X	X	Discharge from output phases to ground.
47	23	Control Voltage Fault	X	X	X	24 V DC may be overloaded.
48	25	VDD1 Supply Low		X	X	Control voltage low. Please contact your local Armstrong supplier.
50		AMA Calibration failed		X		Contact your local Armstrong supplier.
51	15	AMA Unom,Inom		X		The setting of motor voltage, motor current and motor power is presumably wrong. Check the settings.
52		AMA low Inom		X		The motor current is too low. Check the settings.
53		AMA big motor		X		The motor is too big for the AMA to be carried out
54		AMA small mot		X		The motor is too small for the AMA to be carried out
55		AMA par. range		X		The parameter values found from the motor are outside acceptable range.
56		AMA user interrupt		X		The AMA has been interrupted by the user
57		AMA timeout		X		Try to start the AMA again a number of times, until the AMA is carried out. Please note that repeated runs may heat the motor to a level where the resistances Rs and Rr are increased. In most cases, however, this is not critical.

Fault number	Alarm/Warning Bit Number	Fault text	Warning	Alarm	Trip locked	Cause of problem
58		AMA internal	X	X		Contact your local Armstrong supplier.
59	25	Current limit	X			The current is higher than the value in par. 4-18 Current Limit
60	44	External Interlock		X		External interlock has been activated. To resume normal operation, apply 24 V DC to the terminal programmed for external interlock and reset the Adjustable frequency drive (via serial communication, digital I/O, or by pressing reset button on keypad).
66	26	Heatsink Temperature Low	X			This warning is based on the temperature sensor in the IGBT module (Only on 400 V 40–125 hp [30–90 kW] units).
69	1	Pwr. Card Temp	X	X	X	The temperature sensor on the power card is either too hot or too cold.
79		Illegal power section configuration	X	X		Internal fault. Contact your local Armstrong supplier.
80	29	Drive initialized		X		All parameter settings are initialized to default settings.
87	47	Auto DC Braking	X			The drive is auto DC braking
95	40	Broken Belt	X	X		Torque is below the torque level set for no load, indicating a broken belt. See parameter group 22-6.
200		Fire Mode	X			Fire mode has been activated.
202		Fire Mode Limits Exceeded	X			Fire mode has suppressed one or more warranty voiding alarms.
250		New spare part		X	X	The power or switch mode power supply has been exchanged. (Only on 400 V 40–125 hp [30–90 kW] units). Contact your local Armstrong supplier.
251		New Typecode		X	X	The Adjustable frequency drive has a new type code (Only on 400 V 40–125 hp [30–90 kW] units). Contact your local Armstrong supplier.

Table 1.38

1.7.5 EMC Test Results

The following test results have been obtained using a system with a Adjustable frequency drive, a shielded control cable, a control box with potentiometer, as well as a motor shielded cable.

RFI Filter Type	Conduct emission. Maximum shielded cable length (m)								Radiated emission			
	Industrial environment				Housing, trades and light industries		Industrial environment		Housing, trades and light industries			
	EN 55011 Class A2		EN 55011 Class A1		EN 55011 Class B		EN 55011 Class A1		EN 55011 Class B			
	Without external filter	With external filter	Without external filter	With external filter	Without external filter	With external filter	Without external filter	With external filter	Without external filter	With external filter	Without external filter	With external filter
H4 RFI filter (Class A1)												
0.34–15 hp [0.25–11 kW] 3 x 200–240 V IP20			25	50		20	Yes	Yes			-	
0.5–30 hp [0.37–22 kW] 3 x 380–480 V IP20			25	50		20	Yes	Yes			-	
H2 RFI filter (Class A2)												
20–60 hp [15–45 kW] 3 x 200–240 V IP20	25						No			-		
40–125 hp [30–90 kW] 3 x 380–480 V IP20	25						No			-		
1–25 [0.75–18.5 kW] 3 x 380–480 V IP54	25						Yes					
30–125 hp [22–90 kW] 3 x 380–480 V IP54	25						No			-		
H3 RFI filter (Class A1/B)												
20–60 hp [15–45 kW] 3 x 200–240 V IP20			50		20		Yes			-		
40–125 hp [30–90 kW] 3 x 380–480 V IP20			50		20		Yes			-		

RFI Filter Type	Conduct emission. Maximum shielded cable length (m)						Radiated emission		
	1–25 [0.75–18.5 kW] 3 x 380–480 V IP54	25	10		Yes				
30–125 hp [22–90 kW] 3 x 380–480 V IP54		50	10		Yes		-		

Table 1.39

Protection and features

- Electronic thermal motor protection against overload.
- Temperature monitoring of the heatsink ensures that the Adjustable frequency drive trips in case of overtemperature.
- The Adjustable frequency drive is protected against short-circuits between motor terminals U, V, W.
- If a motor phase is missing, the Adjustable frequency drive trips and issues an alarm.
- If a line phase is missing, the Adjustable frequency drive trips or issues a warning (depending on the load).
- Monitoring of the intermediate circuit voltage ensures that the Adjustable frequency drive trips if the intermediate circuit voltage is too low or too high.
- The Adjustable frequency drive is protected against ground faults on motor terminals U, V, W.

Line power supply (L1, L2, L3)

Supply voltage	200–240 V ±10%
Supply voltage	380–480 V ±10%
Supply voltage	525–600 V ±10%
Supply frequency	50/60 Hz
Max. imbalance temporary between line phases	3.0% of rated supply voltage
True Power Factor (λ)	≥ 0.9 nominal at rated load
Displacement Power Factor ($\cos\phi$) near unity	(> 0.98)
Switching on the input supply L1, L2, L3 (power-ups) enclosure frame H1-H5, I2, I3	Max. twice/min.
Switching on the input supply L1, L2, L3 (power-ups) enclosure frame H6-H8, I6-I8	Max. once/min.
Environment according to EN 60664-1	overvoltage category III/pollution degree 2
The unit is suitable for use on a circuit capable of delivering not more than 100,000 RMS symmetrical Amperes, 240/480 V maximum.	

Motor output (U, V, W)

Output voltage	0–100% of supply voltage
Output frequency	0–200 Hz (VVCplus), 0–400 Hz (u/f)
Switching on output	Unlimited
Ramp times	0.05–3,600 sec.

Cable lengths and cross-sections

Max. motor cable length, shielded/armored (EMC-compliant installation)	See 1.7.5 EMC Test Results
Max. motor cable length, unshielded/unarmored	164 ft [50 m]
Max. cross-section to motor, line power*	
Cross-section DC terminals for filter feedback on enclosure frame H1-H3, I2, I3	4 mm ² /11 AWG
Cross-section DC terminals for filter feedback on enclosure frame H4-H5	16 mm ² /6 AWG
Maximum cross-section to control terminals, rigid wire	2.5 mm ² /14 AWG
Maximum cross-section to control terminals, flexible cable	2.5 mm ² /14 AWG

Minimum cross-section to control terminals 0.05 mm²/30 AWG

*See tables for line power supply for more information

Digital inputs:

Programmable digital inputs	4
Terminal number	18, 19, 27, 29
Logic	PNP or NPN
Voltage level	0-24 V DC
Voltage level, logic '0' PNP	< 5 V DC
Voltage level, logic '1' PNP	> 10 V DC
Voltage level, logic '0' NPN	> 19 V DC
Voltage level, logic '1' NPN	< 14 V DC
Maximum voltage on input	28 V DC
Input resistance, R _i	Approx. 4 kΩ
Digital input 29 as thermistor input	Fault: > 2.9 kΩ and no fault: < 800Ω

Analog inputs

Number of analog inputs	2
Terminal number	53, 54
Terminal 53 mode	Parameter 6-19: 1 = voltage, 0 = current
Terminal 54 mode	Parameter 6-29: 1 = voltage, 0= current
Voltage level	0-10 V
Input resistance, R _i	approx. 10 kΩ
Max. voltage	20 V
Current level	0/4 to 20 mA (scalable)
Input resistance, R _i	<500Ω
Max. current	29 mA

Analog output

Number of programmable analog outputs	2
Terminal number	42, 45 ¹⁾
Current range at analog output	0/4-20 mA
Max. load to common at analog output	500 Ω
Max. voltage at analog output	17 V
Accuracy on analog output	Max. error: 0.4% of full scale
Resolution on analog output	10 bit

1) Terminal 42 and 45 can also be programmed as digital outputs.

Digital output

Number of digital outputs	2
Terminal number	42, 45 ¹⁾
Voltage level at digital output	17 V
Max. output current at digital output	20 mA
Max. load at digital output	1 kΩ

1) Terminals 42 and 45 can also be programmed as analog output.

Control card, RS485 serial communication

Terminal number	68 (P, TX+, RX+), 69 (N, TX-, RX-)
Terminal number	61 Common for terminals 68 and 69

Control card, 24 V DC output:

Terminal number	12
Max. load enclosure frame H1-H8, I2-I8	80 mA

Relay output

Programmable relay output	2
Relay 01 and 02	01-03 (NC), 01-02 (NO), 04-06 (NC), 04-05 (NO)
Max. terminal load (AC-1) ¹⁾ on 01-02/04-05 (NO) (Resistive load)	250 V AC, 3A
Max. terminal load (AC-15) ¹⁾ on 01-02/04-05 (NO) (Inductive load @ cosφ 0.4)	250 V AC, 0.2 A
Max. terminal load (DC-1) ¹⁾ on 01-02/04-05 (NO) (Resistive load)	30 V DC, 2A
Max. terminal load (DC-13) ¹⁾ on 01-02/04-05 (NO) (Inductive load)	24 V DC, 0.1A
Max. terminal load (AC-1) ¹⁾ on 01-03/04-06 (NC) (Resistive load)	250 V AC, 3A
Max. terminal load (AC-15) ¹⁾ on 01-03/04-06 (NC) (Inductive load @ cosφ 0.4)	250 V AC, 0.2 A
Max. terminal load (DC-1) ¹⁾ on 01-03/04-06 (NC) (Resistive load)	30 V DC, 2A
(NC) (Resistive load)	Min. terminal load on 01-03 (NC), 01-02 (NO) 24 V DC 10 mA, 24 V AC 20 mA
Environment according to EN 60664-1	Overvoltage category III/pollution degree 2

1) IEC 60947 parts 4 and 5.

Control card, 10V DC output

Terminal number	50
Output voltage	10.5 V ±0.5 V
Max. load	25 mA

All inputs, outputs, circuits, DC supplies and relay contacts are galvanically isolated from the supply voltage (PELV) and other high-voltage terminals.

Surroundings

Enclosure	IP20
Enclosure kit available.	IP21, TYPE 1
Vibration test	1.0 g
Max. relative humidity	5–95% (IEC 60721-3-3; Class 3K3 (non-condensing) during operation
Aggressive environment (IEC 60721-3-3), coated (standard) frame H1-H5	Class 3C3
Aggressive environment (IEC 60721-3-3), non-coated frame H6-H10	Class 3C2
Aggressive environment (IEC 60721-3-3), coated (optional) frame H6-H10	Class 3C3
Test method according to IEC 60068-2-43 H2S (10 days)	
Ambient temperature	See max. output current at 104°/122° F [40°/50°C] in the tables line power supply

Derating for high ambient temperature, see section on special conditions

Minimum ambient temperature during full-scale operation	32° F [0°C]
Minimum ambient temperature at reduced performance, enclosure frame H1-H5	-4° F [-20°C]
Minimum ambient temperature at reduced performance, enclosure frame H6-H10	14° F [-10°C]
Temperature during storage/transport	-22°–+149°/158° F [-30°–+65°/70°C]
Maximum altitude above sea level without derating	3,280 ft [1,000 m]
Maximum altitude above sea level with derating	9,842 ft [3,000 m]
Derating for high altitude, see section on special conditions	
Safety standards	EN/IEC 61800-5-1, UL 508C
EMC standards, Emission	EN 61800-3, EN 61000-6-3/4, EN 55011, IEC 61800-3
	EN 61800-3, EN 61000-3-12, EN 61000-6-1/2, EN 61000-4-2, EN 61000-4-3, EN 61000-4-4, EN
EMC standards, Immunity	61000-4-5, EN 61000-4-6

1.8 Special Conditions

1.8.1 Derating for Ambient Temperature and Switching Frequency

The ambient temperature measured over 24 hours should be at least 41° F [5°C] lower than the max. ambient temperature. If the Adjustable frequency drive is operated at high ambient temperature, the continuous output current should be decreased.

1.8.2 Derating for Low Air Pressure

The cooling capability of air is decreased at low air pressure. For altitudes above 6,600 feet [2,000 m], please contact Armstrong regarding PELV. Below 3,281 ft [1,000 m] altitude no de-rating is necessary, but above 3,281 ft [1,000 m] the ambient temperature or the maximum output current should be decreased. Decrease the output by 1% per 328 ft [100 m] altitude above 3,281 ft [1,000 m] or reduce the max. ambient temperature by 1° per 656 ft [200 m].
